

ELECTRIFYING CHANGE

A revised design for our solar installation

Dear Resident,

We have submitted an amendment to our planning application for a small solar development to generate electricity for Shell Bacton Gas Terminal.

Shell and RenEnergy Limited have sought to improve the proposals in response to comments from North Norfolk District Council's planning consultation process and our own community engagement. We have listened to views and taken measures to address the main concerns raised.

The redesign proposes a reduced and more consolidated layout that retains a 60m wide portion of the existing open field to address what is seen as an important gap in development between the industrial complex and the village, and respect the prevailing character of the landscape.

We expect the Council to run a re-consultation on the application with a project redesign. Shell and RenEnergy will now focus on this process and be in close liaison with the Council regarding any further comments via the planning portal.

The latest proposals can be viewed on North Norfolk District Council's Planning Portal using the planning application reference PF/21/1878

Your sincerely,

Shell Bacton Gas Terminal

RenEnergy Limited
